

ByrdOpti

Recommended ISLC Settings (Gaming / Low Latency) ISLC is mainly used to reduce memory standby list issues and improve frame-time consistency. It is not an FPS booster, but it can help reduce stutters in some games (especially Rust)

Recommended Settings:

- Wanted Timer Resolution: 0.50 ms ISLC
- Polling Rate: 1000 ms
- Enable Custom Timer Resolution
- Enabled Start ISLC Minimized
- Enabled Launch ISLC On User Logon
- Enabled Always Force Timer Resolution
- Memory Settings: 16GB RAM: - The list size is at least: 8192 MB - Free memory is lower than: 1024 MB
- 32GB RAM: - The list size is at least: 16384 MB - Free memory is lower than: 2048 MB
- 64GB RAM: - The list size is at least: 32768 MB - Free memory is lower than: 4096 MB
